

## README - Project 02: Sales Performance Dashboard

### Project Overview

This project is a professional Sales Performance Dashboard built in Microsoft Excel using a dataset of 5,000 sales transactions. The objective was to transform raw sales data into an interactive dashboard that provides meaningful business insights for management through KPIs, PivotTables, charts and slicers.

### Workbook Structure

- **Raw\_Data:** Original sales dataset formatted as an Excel Table.
- **Lookup:** Lookup lists, named ranges and data validation sources.
- **Calculations:** Formula-based calculations and KPI support.
- **Pivot:** All PivotTables and PivotCharts used for the dashboard.
- **Dashboard:** Interactive executive dashboard with KPI cards and slicers.

### Skills Learned

- Excel Tables & Structured References
- Named Ranges
- Data Validation (Drop-down Lists)
- SUMIFS
- COUNTIFS
- AVERAGEIFS
- XLOOKUP
- IFERROR
- SUMPRODUCT
- PivotTables
- PivotCharts
- Slicers
- KPI Card Design
- Dashboard Formatting
- Business Analysis & Insight Generation

### Project Development Process

1. Converted the raw dataset into an Excel Table.
2. Created lookup tables and dynamic drop-down lists.
3. Applied advanced Excel formulas to perform calculations.
4. Built PivotTables for regional, product, salesperson, monthly, profit and customer analysis.
5. Created PivotCharts using appropriate chart types.
6. Designed KPI cards for Total Sales, Total Profit, Total Orders and Profit Margin.
7. Connected slicers to all PivotTables for interactive analysis.

8. Formatted the dashboard with a professional layout and consistent design.

### **Business Insights Generated**

- Top-performing Region
- Top-performing Product
- Top-performing Salesperson
- Monthly Sales Trend
- Profit by Product
- Top 10 Customers
- Strategic recommendations based on sales and profitability
